DTIC QUALITY INSPECTED 1

VOLUME 8 Changes. Chapter 4. Replace existing definition of Note DA with the following:

The Package Sequence Numbers (PSN) is constructed of an alpha A through Z in the first position, and the numerics 00 through 99 in the next two positions. If a transaction contains only one record the PSN will be Z01.

When a transaction contains multiple records, the first segment record in a transaction package will begin with A01; the second A02; the third A03; the final record will be assigned a Z in the first position, and the next sequential number in the next two positions. If the package exceeds 99 segment records, the 100th segment record will be B00; the 101st B01; etc. If the package exceeds PSN Y99, then Y99 will be repeated until the final record which will be Z00.

DICs LSF and LSR are an exception. The LSR input transaction cannot exceed PSN Z25 for the same Submitter Control Number (DRN 1120). If a transaction package consists of only one segment record, PSN Z01 will be used. Output from these DICs will be in alpha-numeric format. (See Volume 1, paragraph 1.3.1.d).
